Observed share of nodes in the ambient system, $|S_r|/|N|$
Flow weight, aggregate over N (exact class)
Interaction weight, subgroup totals over N (exact class)
Flow weight, aggregate over S_r (inadmissible regime)
Concentration of target shares,
equal-allocation point ($q^* = m$)
Closeness on S_r-subgraph ($q^* = \infty$)
Betweenness on S_r-subgraph ($q^* = \infty$)
PageRank on S_r-subgraph ($q^* = \infty$)
